Happy Patel

Platform / DevOps Engineer · AWS · Terraform · Kubernetes · Python · Go | Infrastructure automation & developer self-service | Ex-Guidewire

India

Summary

I build the infrastructure and automation that other engineers depend on. Over four years at Guidewire across Canada and India, I operated AWS cloud infrastructure for an enterprise SaaS platform and moved steadily from supporting it to automating it - designing agentic workflows in Python and Node.js that eliminated manual triage from our platform pipeline, and spending a rotation on the product engineering team building backend features in Go. Independently, I built Repo Factory: a self-service Terraform system that provisions fully governed GitHub repositories from a single declarative catalogue entry. It's the kind of golden path that stops branch protection, review requirements and naming policy from drifting as an organisation grows - a problem most teams don't notice until day 400. I'm now going deeper on Kubernetes and building platform tooling in Go. What I work with: AWS (IAM, EC2, RDS) · Terraform · Infrastructure as Code · Python · Go · Node.js · GitHub Actions · CI/CD · Kubernetes (in progress) Currently based in India and returning to Canada as my PR finalises. Open to remote roles worldwide, and to Platform, DevOps, SRE and Infrastructure roles in Toronto/GTA

Experience

Guidewire Software

4 years 1 month

Platform Support Engineer II

August 2025 - August 2026 (1 year 1 month)

Bengaluru, Karnataka, India

AI-Driven Automation: Pioneered the use of Agentic Workflows and custom Python/Node.js automation suites to eliminate manual triage, reducing the global database pod's workload by 40%.

Identity SME: Serve as the Okta Verify SME for the India region, ensuring secure identity lifecycles for Tier-1 enterprise clients—bridging the gap between software reliability and info-sec compliance.

Database Reliability: Lead root cause analysis (RCA) and performance tuning for production PostgreSQL/MySQL environments, ensuring 99.9% availability for mission-critical platforms.

Platform Support Engineer II
November 2024 - August 2025 (10 months)
Mississauga, Ontario, Canada

Cloud Software Engineering Intern
February 2025 - June 2025 (5 months)
Mississauga, Ontario, Canada

Product Engineering: Selected for a high-impact rotation to develop core backend features using GoLang and Python in a high-velocity Agile environment.

Infrastructure as Code: Engineered cloud-native resources on AWS using Terraform, aligning infrastructure scaling with core product performance requirements.

Reliability Engineering: Maintained 100% code coverage for new modules through rigorous unit and integration testing.

Platform Support Engineer
May 2023 - November 2024 (1 year 7 months)
Mississauga, Ontario, Canada

Technical Support Engineer
August 2022 - May 2023 (10 months)
Mississauga, Ontario, Canada

GAOTek Inc.
Intern
August 2021 - November 2021 (4 months)

Education

York University

BSc, Computer Science · (2019 - 2023)

Zero To Mastery Academy

Web Development · (2020 - 2020)
